SUMMARY

Detail-oriented Business Information Technology student at BINUS University specializing in Artificial Intelligence. Experienced in data analysis, predictive modeling, statistical analysis, and interactive dashboard creation using Python, SQL, and advanced Excel. Adept at translating complex raw datasets into actionable insights and data-driven solutions to solve real-world problems. Eager to contribute as a Data Scientist or Data Analyst Intern.

KEY COMPETENCIES

- **Programming & Libraries:** Python (Pandas, NumPy, Scikit-Learn, Matplotlib/Seaborn), SQL (MySQL).
- **Data Analytics & BI:** Microsoft Excel (Power Pivot, DAX, What-If Analysis, Slicers), Exploratory Data Analysis (EDA), Data Cleaning, Business Intelligence.
- **Machine Learning & AI:** Supervised Learning, Regression & Classification, Model Evaluation, Explainable AI (SHAP, LIME), Google AI Studio (Gemini API).
- **Tools & Platforms:** Git, VS Code, Jupyter Notebook, Microsoft Azure (VM/Cloud deployment), Trello.

EDUCATION

BINUS University

2024 - Present

GPA : 3.83 / 4.00

- Major in Business Information Technology
- Specialization in Artificial Intelligence in Business

PROJECTS

E-Commerce Customer Churn Prediction & Explainable AI

July 2026

- Built an end-to-end ML classification pipeline on 50,000 customer records, applying SMOTE strictly on training data to resolve 71:29 class imbalance without data leakage.
- Evaluated Logistic Regression, Decision Tree, and Random Forest; achieved best performance using Random Forest with 90.34% Test Accuracy and 0.923 ROC-AUC.
- Utilized SHAP, LIME, and Feature Importance to uncover key churn drivers (Customer Service Calls, LTV, Cart Abandonment), delivering interpretable risk insights.

Smart Sawit (IoT Smart Palm Oil Plantation) - Palmy Team**May 2026**

- Architected an IoT telemetry pipeline utilizing ESP32, DHT11, and soil hygrometer sensors to stream microclimate data to a Blynk cloud dashboard in real time.
- Formulated functional logic and API integration workflows to connect plantation sensor telemetry with the Gemini API (Google AI Studio) for automated agricultural recommendations.
- Created exhibition banners and pitch assets, helping secure 1st Rank in cohort and showcasing at SPARK EXPO 2026.

Smartphone CPU Performance Dashboard**May 2026**

- Built an interactive BI dashboard in Microsoft Excel utilizing Power Pivot and Cube Functions to evaluate smartphone benchmark datasets.
- Developed custom DAX measures and dynamic Slicers to enable multi-variable chipset performance comparisons.
- Applied What-If Analysis models to simulate performance scenarios and support data-driven decision-making.

KOMPAS (Project Management Information System)**March 2026**

- Conceptualized functional requirements and user workflows for an academic project tracking information system.
- Structured collaborative project boards and task-tracking workflows in Trello to organize academic project milestones.

HealthyLife Hub (Health Information System)**December 2025**

- Developed a web-based wellness portal using PHP and MySQL to manage health articles, interactive lifestyle tracking (sleep and nutrition), and wellness quizzes.
- Implemented user-role access controls allowing regular users to track activities while granting administrators full CRUD capabilities for article management.
- Integrated Google AI Studio (Gemini API) into a virtual chatbot, engineered with domain-specific prompting to provide automated health and wellness guidance.

CERTIFICATIONS

- Workshop "Introduction to Business Process Modeling – SAP Signavio for Beginners"
School of Information Systems, BINUS University
October 2025
- Self-Paced Azure AI Basic Fundamental
ElevAlte (Microsoft, KOMDIGI, GreatNusa)
Credential ID: 22cba1ed-f994-46f3-9f14-1acad3b51ca2
May 2025
